SOFTWARE SPECIFICATIONS
BULLETIN 2

UPDATE TO
PUBLICATION 1346N
FOR
TAX YEAR 2005
October 5, 2005

This document supplements Nebraska Publication 1346N, and is intended
to notify software developers in the Federal/State Electronic Filing Program
of changes to original specifications releases.

TAX YEAR 2005 BULLETIN #2

Generic Record Specifications Changes <mark>Since the revisions outlined in Bulletin #1:</mark>

These are corrections to the September 2005 draft as of October 5, 2005. Any further changes will be provided with additional bulletins if needed.

ALPHANUMERIC FIELD 2 CORRECTION

The Not Used filler area at the end of Alphanumeric Field 2 Sequence # 305 was incorrectly shown as being in positions 38-80. It should be positions 58-80. The record layout has been updated to correct this error.

ALPHANUMERIC FIELD 4 CORRECTION

The Not Used filler area at the end of Alphanumeric Field 4 Sequence # 315 was incorrectly shown as 2 bytes. It should be 12. The record layout has been updated to correct this error.

INCORRECT SEQUENCE NUMBER REFERENCES

The Schedule I Line 53 Other Adjustments Worksheet contain invalid Sequence Number references. This has been corrected to read, "The sum of Sequence Numbers 0780 - 0805 must equal 1040N Schedule I Line 53."

DATA FIELD SHORT NAME ERRORS

For any developer who for any reason may use the field "short names" shown in column 2 of Appendix B, some names in the Nebraska Schedule II portion of the specifications were wrong. These short names are not intended for developer use. They are primarily for internal use, and are typically made up of the Sequence Number and when appropriate a line number reference. Some of the line number references were incorrect. These have been corrected in this latest release.
